

Sarvin Rezazadeh

IT

درباره من

Frontend Engineer with deep expertise in modern web technologies and strong problem-solving skills. Proficient in React, Redux, Next.js, and TypeScript, with practical experience in integrating complex APIs, managing scalable UI architectures, and containerizing applications using Docker. Skilled at building dynamic and maintainable user interfaces that combine performance, usability, and elegant design. Experienced in system monitoring, debugging, and improving frontend efficiency through data-driven decisions. Highly motivated to continuously learn new technologies, explore advanced frontend architectures, and expand into AI-driven and intelligent user experience domains.

تجربه‌های کاری

Front-end Developer

شرکت تجارت الکترونیک و فناوری اطلاعات ملل (فام) | فروردین ۱۴۰۳ تا حالا

- Developed and maintained core modules of a large-scale banking platform, focusing on building scalable and maintainable user interfaces using React and Next.js.
- Designed and implemented a dynamic, drag-and-drop dashboard system to support multiple business domains such as project management, HR workflows, and real estate operations.
- Built complex workflow-driven UI systems based on BPMN concepts, integrating with Form.io to render and manage dynamic forms and multi-step task flows across users and roles.
- Developed an interactive relationship graph visualization using D3.js to represent entity connections, significantly improving system transparency and contributing to ISMS certification processes.
- Implemented real-time and data-driven UI components, ensuring seamless integration with backend APIs and efficient state management using modern frontend patterns.
- Containerized frontend applications using Docker and deployed them across multiple environments, also working with Podman for production-level container management.
- Improved system observability by integrating monitoring tools such as Grafana and Prometheus, enabling better tracking of frontend-related performance and system health.
- Enhanced application security and production readiness by configuring Nginx, handling error scenarios, and implementing protections such as rate

limiting and Fail2Ban.

- Optimized production builds by managing source maps and improving debugging workflows while maintaining security best practices.

- Contributed to internal chatbot development by experimenting with LLM-based solutions (local models and API-based), aiming to improve user interaction and automation within the platform.

Front-end Developer intern

آی اپس (iApps) | تیر ۱۴۰۲ تا اسفند ۱۴۰۲

- Contributed to the development of a modern web platform, including a Progressive Web App and internal developer dashboard, using React and modern frontend tools.

- Built responsive and interactive UI components using technologies such as Redux, and Material UI, focusing on performance and usability.

- Participated in a monorepo architecture setup using Turborepo, enabling simultaneous development of multiple applications including back-office systems and developer panels.

- Developed a multi-language crypto rate dashboard with features such as pagination, dark/light mode, and real-time data fetching using React Query.

- Worked on debugging, refactoring, and improving existing features within production systems, gaining hands-on experience in maintaining scalable frontend applications.

- Applied modern frontend practices including component-based architecture, clean code principles, and efficient state management strategies.

CRM Manager

آی اپس (iApps) | مرداد ۱۴۰۱ تا تیر ۱۴۰۲

- Managed CRM operations using Didar CRM, designing and optimizing both B2B and B2C workflows to improve customer acquisition and retention.

- Led the support team as a supervisor, handling quality control (QC), performance monitoring, and process improvements for customer support operations.

- Designed customer journey flows, identifying pain points and improving user satisfaction through structured problem-solving and data-driven decisions.

- Played a key role in bridging technical and business teams, ensuring better alignment between product development and user needs.
